# Scientific Calculator

Made a Scientific Calculator using html,css and javascript

With my second task at Dabotics India Pvt Ltd as an intern , I got a chance to build a scientific calculator with front end in html and css and javascript

The website has the following features:

## 1] Javascript Functionalities:

Got to know about the event handlers wherein they are able to catch up the event by the cursor and able to get the value of the button.
Got to know about how function calls are made in javascript ..

## 2]HTML And Css :

Normal html elements were used . Button tags were used and with the help id and class selectors styling was made using css.
Got to know about flex box , could use some of its functionalities such as flex-direction etc..
Got to know about the Box shading text-shading and they functionalities..
